

# MONTHLY NEWSLETTER

APRIL 2026

Dear Colleague,

I am writing this newsletter on Easter Monday. We trust you had a well earned break and a blessed Easter.

We have had to cancel our upcoming Open Day that was planned for the 17th of April. This wasn't a decision we made lightly, but we thought it was best, until the war is settled and everyone can be assured of more affordable fuel, etc. We still look forward to having one this year and will release a new date when it has been rescheduled.

We will have our next webinar invitation out within the next ten days - planning for late May. Our next presenter is Peter Clarke a renowned Naturopath, Homeopath and registered Pharmacist. Peter has been a senior lecturer at several naturopathic colleges. Peter has been in clinical practice for decades and has vast knowledge and experience prescribing comp meds, including Bioresearch.

Also keep an eye out for a mid-month podcast, as I start quick referencing the use of Bioresearch drops for common and seasonal conditions.

Peter and I are planning to bring some innovations to Naturopaths using AI, to give greater insights into the patient's condition and

pre assessments if the patient has an upcoming appointment booked, so that much is already presented at the time of their arrival. This has many benefits: more time for any tactile work needed, allowing for quicker consultations and potentially better prescribing. More and more Naturopaths are seeing patients online for some of their consultations, and our aim is to give the patient greater insights into their holistic healing, working with you as their Practitioner and Mentor. The assessment results should be motivational for the patient to follow the diet and lifestyle plans or protocols when they are aware of the risks of not making the changes you advise. This won't happen overnight, but we have the programmers and are committed to making it a reality. We would appreciate any positive suggestions you may have, please submit them on the BioActiv website, as they may provide valuable additions to this unique package. Our endeavours are to support the profession and incorporate education into the suggested protocols you get to see, not the patient, to then further prepare your healing packages.

Our Herbal Glycetracts 1-1. Our range is now 90 potent non-alcoholic herbals. As stated previously, we are slowly gaining traction with the distributor. Western Australia has supported us the best so far, with all 90 ordered. 80 are in stock and the last of the 90 will arrive there in approximately 10 days. A large clinic recently asked their distributor to request a discount on 30 assorted bottles a month. That's a big clinic. We reiterated that we offer, through all the distributor stockists, a **5% discount on 6 assorted and 10% off for an assorted buy of 12**. The distributor claims this discount back from us at the end of the month. The beauty of this is we give you a discount reward without you having to deal direct and run extra accounts to get a discount, and generally paying much higher prices before the extra discount. We are chuffed, as this clinic would not have asked for a deal on volume unless they had fully assessed the efficacy of our 1-1 Glycetracts.

We are like Uber on a small scale, disrupting an industry and causing prices to become more competitive in the long run. None can argue herbal extracts have become a very expensive comp med in the past decade due to many forces. If you are a consistent herbal stockist, or combined with your comp med orders, I

am sure the distributors are open to giving a little more than our bulk offer, so you may be open to negotiate further if you feel your volume purchases could be worthwhile, as you have a start with our Glycetract offer, which is permanent. It doesn't hurt to ask; we are not making any assurances.

The distributors have a difficult job trying to assess the needs of the practitioners and to stock what is likely to sell. It's made much easier if you write to them, telling them what your likely purchases upcoming will be. Even better, write to us [sales@bioactives.com.au](mailto:sales@bioactives.com.au), as we know the exact buyer to communicate your requests. We are very confident BioActive Botanicals will give you terrific compliance and outcomes as you put your toe in the water. Our current top six selling 1-1 Glycetracts so far are Dandelion Root, Olive Leaf, Echinacea Purpurea, Hawthorn Berry, Lemon Balm, and Mistletoe. Our Olive Leaf leaves the ones sold in the retail stores for dead, tested at around 110mg Oleuropein in 5ml. With such outstanding potency and value, let's present your herbal concoctions with less alcohol and have some glycerine based herbs to complete the synergy, so you can feel your way into this paradigm shift, so everyone benefits.

# Compounding updates

In February we brought in a new Shilajit powder into our compounding range. See the picture and new price, while higher, it offers significantly greater intrinsic value. This is now a natural, purified form providing 95% fulvic acid, and is a fabulous adaptogen, electron donor, and chelator.

These days, with so many people coming to you dog-tired, low in sex hormones, experiencing E.D., matrix rigidity, or seeking faster recovery from strenuous exercise and improved performance, this ingredient can be a sensational additive to your Nitric Oxide (NO)-boosting or Sarcopenia compounding formulations. Whether it's Creatine, Arginine Nitrate, Leucine, BCAAs, Citrulline Malate, Dimethyl Glycine, 22Pure Aminos, Organic Beetroot Powder, Organic Moringa Powder, Organic Maca Powder, Spermidine Forte, or MagNeze Powder (with five forms of magnesium and cofactors), Shilajit pairs beautifully. Many Sarcopenia formulations don't take NO into the solution to give the muscle energy, not just growth factors. A new and very unique NO-donor combination is being soft-launched in our next communication in a few weeks with my podcast.

I will always remain enthusiastic about stable oxygen supplementation in drinking water. Bioactiv Vo2It is an advanced formulation of electrolytes of oxygen and is buffered to a pH of 9 with Alka-OH, available in Health Script as a pure 45ml concentrate. These oxygen electrolytes are powerful

redox-signalling molecules. By helping to boost catalase, SOD, and glutathione - our most important innate antioxidant enzymes - we benefit greatly from something as simple as a glass of water with 5-10ml of Vo2It. You can measure the increase in partial pressure of oxygen with an oximeter in around 15 minutes after one dose. You may notice the partial pressure improving or the pulse coming off a high by a measurable amount, all from a single supplementation. Vo2It is a wonderful catalyst and may also underpin NO production, vasodilation, and balanced blood pressure.

Please view the latest YouTube video on spermidine and its role in stalling ageing. Spermidine Forte contains, in each 2-gram serve, 20mg of pure spermidine in a base of 200mg of NMN, blue spirulina, and glycine. I get a measurable, sustainable lift in energy when using Spermidine Forte in a beverage with my daily supplements, and it tastes great. It can be added to a bottle of water or cold herbal tea to sip throughout the day for those who like to stay alert without relying on coffee.

# NEW PRODUCT soft launch!

## BIOACTIVCOMPOUNDING pHBuffer225gm IS NOW AVAILABLE

This updated formula has been fully revised and re-released. It's brand new and not yet with distributors, but it is available directly or in private label for now. We're confident it will become a distributor favourite.

**BACL61 pH Buffer 225g w/sale \$14.24 r/retail \$23.50**

**INGREDIENTS** Sodium bicarbonate, Xylitol, Potassium bicarbonate, Sodium citrate, Magnesium carbonate, Potassium citrate, Glycine, Malic acid, Silica colloidal.
